

ATMOphon

EASYline

Linear acoustic systems, perfectly installed.

ATMOphon EASYline is a freely configurable system which can be easily adapted to your specific requirements. Due to a considerable design flexibility you are able to freely choose slat dimensions, different gap sizes, colour and material. Thanks to the customization of the substructure at the factory, no assembly is necessary. The slats are fitted invisibly without the use of any tools. Lengths up to 6 m, flush fitting installation of the longitudinal joints without additional connecting elements and the mounting on compatible carrier material make the system suitable for any architectural environment. Acoustic absorbers are integrated in line with the strips of the substructure.

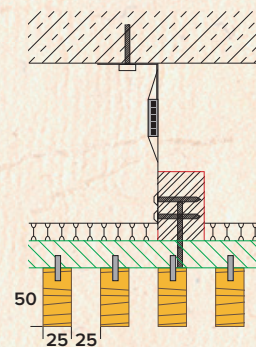

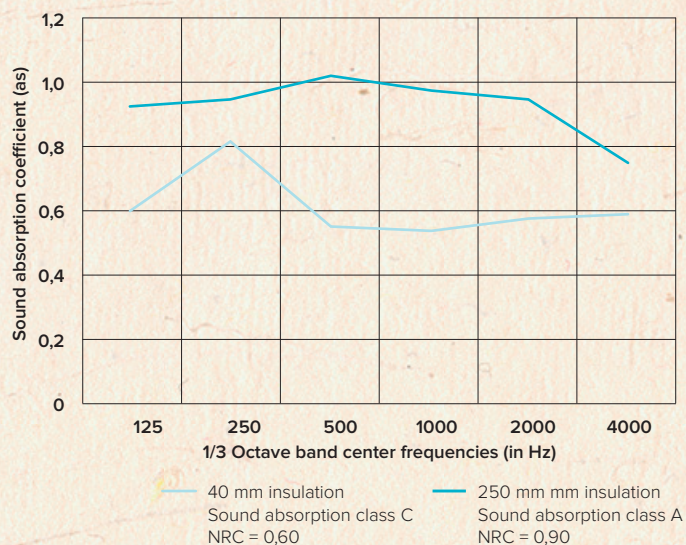

Modern acoustics implemented in the most efficient way.

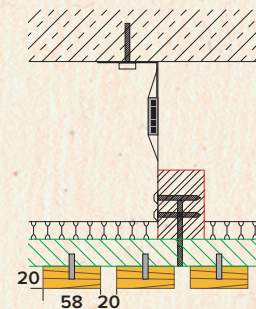

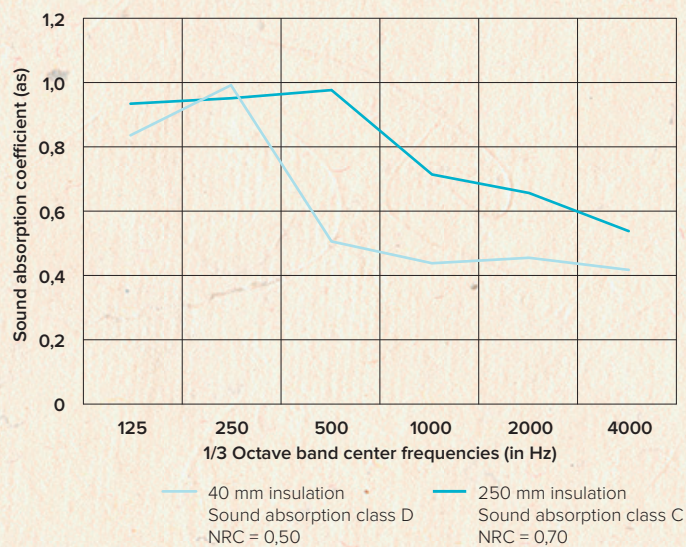

SOUND ABSORPTION COEFFICIENT

Certified in accordance with DIN EN ISO 354:2003-12
